

### THE PRODUCT

NILOBIT 5 are plastomeric waterproofing membranes manufactured in an advanced continuous calendaring process by saturating and coating a synthetic carrier with a waterproofing compound made of a special grade of bitumen, which is modified with APP polymers. While the APP polymers enhance the thermal, mechanical, and aging properties of the membranes compound. the mechanical characteristics of NILOBIT 5 are established by the non-woven continuous filament spun-bond Polyester or Glassfiber mat which acts as the reinforcement that provides the membrane with its particular tensile strength, tear resistance, puncture resistance and elongation properties.

The upper surface of NILOBIT 5 is covered with an anti-adhesive finish material while the lower surface is laminated with a thermo-fusible polyethylene film.

#### **USES**

NILOBIT 5 are multi-purpose membranes for roofing & waterproofing applications subjected to different mechanical stresses and moderate weathering conditions, in multi layer systems and can be used as a single layer in specific application.

NILOBIT 5 membranes are particularly recommended for the following applications.

- Roofing or re-roofing works for sloped and flat protected roofs.
- Waterproofing of underground structures
- Waterproofing of wet areas, mechanical rooms and terraces.

NILOBIT 5 MINERAL is used for exposed applications or as a capsheet in a multi-layer system.

# NILOBIT 5 Smooth NILOBIT 5 Mineral

**APP Modified Bitumen Waterproofing Membranes** 

With Non-Woven Spun-Bond Polyester or Glassfiber Reinforcement

#### SURFACE FINISH

The lower surface of NILOBIT 5 is laminated with a Polyethylene film while the upper surface is covered with one of the following surface finish materials:

Fine Sand

· Polyethylene Film

Mineral Slate chips or Special Granules

NILOBIT 5- S/E NILOBIT 5- E/E

**NILOBIT 5 MINERAL** 

#### **APPLICATION**

**NILOBIT 5** is usually applied by using a propane torch or a hot air generator as well as by mechanical fastening. It can also be applied using special adhesives in cold or hot applications. The substrate surface must be clean, dry, smooth, and free from any irregularities. According to the surface conditions, a coat of BituNil primer maybe required prior to the application of the membrane.

NILOBIT 5 can be applied to the substrate fully bonded, semi bonded or loose laid, and the method of adhesion to the substrate shall be decided according to the waterproofing system design. Side laps should be from 8-10 cm, while end laps should be from 12-15 cm. For more info on application refer to BituNil application guide.

#### STORAGE & HANDLING

NILOBIT 5 rolls should be kept in an upright position in a flat, properly ventilated and sheltered storage area.

#### STANDARD SUPPLY DATA & PALLETISING

Group 100	Group 105	Thickness *	Standard	Rolls / Pallet
